

GARAGE FLOOR COATING SYSTEM

1 GRIND CONCRETE

We start by diamond grinding the concrete — this removes imperfections and roughs up the surface so the coating penetrates and bonds to the concrete, which provides a durable coated surface that lasts for years to come.

2 MOISTURE BARRIER COATING

Our experts evaluate and apply a moisture barrier coating as needed based on conditions.

3 BASE COAT

Next, we apply a color base coat, giving the garage floor a smooth, even foundation and appearance.

4 CHIP BROADCAST

This creates a textured, non-slip surface, and truly makes the floor look amazing. We've got several popular color options to choose from. This really makes your garage stand out.

5 DURABLE CLEAR TOPCOAT

This top layer seals everything in and gives the floor its glossy yet grippy, easy-to-clean, long-lasting finish.
